GIMAN ENERGY LLC

- **Energy for theWorld**

Since 2016, GIMAN Group has provided comprehensive project management solutions for the **oil & gas, power generation, mining, and steel sectors** in the U.S. and Mexico.

Combining technical expertise with agility, and backed by **strategic alliances and advanced technology,** the company ensures **safety, efficiency, and reliability** in every project.

Trusted by major clients such as **Cemex, PEMEX, CFE, Grupo México, Siemens.** GIMAN Group operates under **Industry 4.0 and Quality 4.0 principles** to drive operational excellence and prepare partners for future challenges.

Manufacturing Capabilities

Automation & Productivity

- Based in Monterrey, a prime nearshoring hub in northern Mexico, our 40,000 sq. ft. manufacturing facility in Santa Catarina brings every stage of production under one roof.

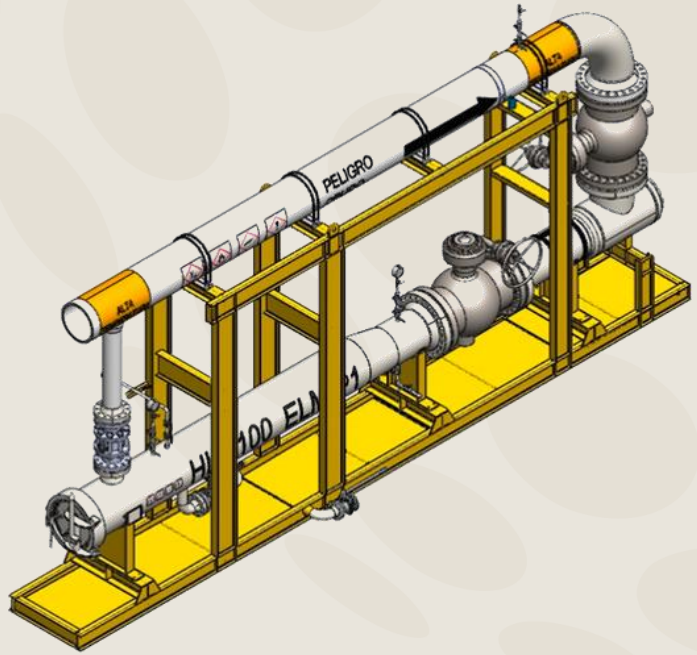

- This **integrated approach streamlines communication, maximizes efficiency**, and accelerates delivery timelines, while ensuring that every solution meets the highest industry standards and is tailored to our clients' unique needs.

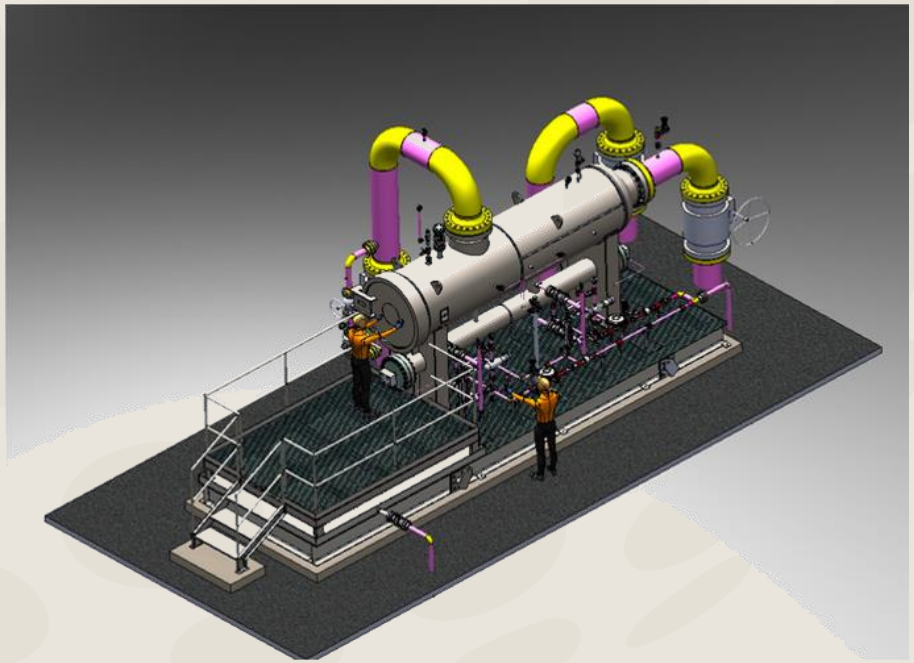

Engineering Capabilities

Seasoned Team

Our team of experts in mechanical, civil, process, instrumentation, automation, and piping bring together the skills necessary to tackle complex challenges. By combining their expertise, **we deliver innovative solutions that are efficient, reliable, and built to the highest standards**. Driving project success from start to finish.

Metering Skid, *flow measurement unit*

Gas filter separator, *scrubber/ slug catcher*

Products & Solutions

Metering Skids

Our pre-assembled metering skids are designed to **provide accurate measurement of natural gas and other gases.** Ensuring both efficiency and compliance, each unit integrates:

- **Advanced Flow Meters** (ultrasonic, turbine, rotary, Coriolis, or orifice plate)
- **Smart Flow Computers** for data accuracy.
- **Critical Instrumentation** (pressure, temperature, and density transmitters.).
- **Robust Valves and Piping Systems**
- All components mounted on a **durable skid-type steel structure** for easy install.

Metering Skid (left); High-Accuracy Flow Skid, *Ultrasonic skid* (right)

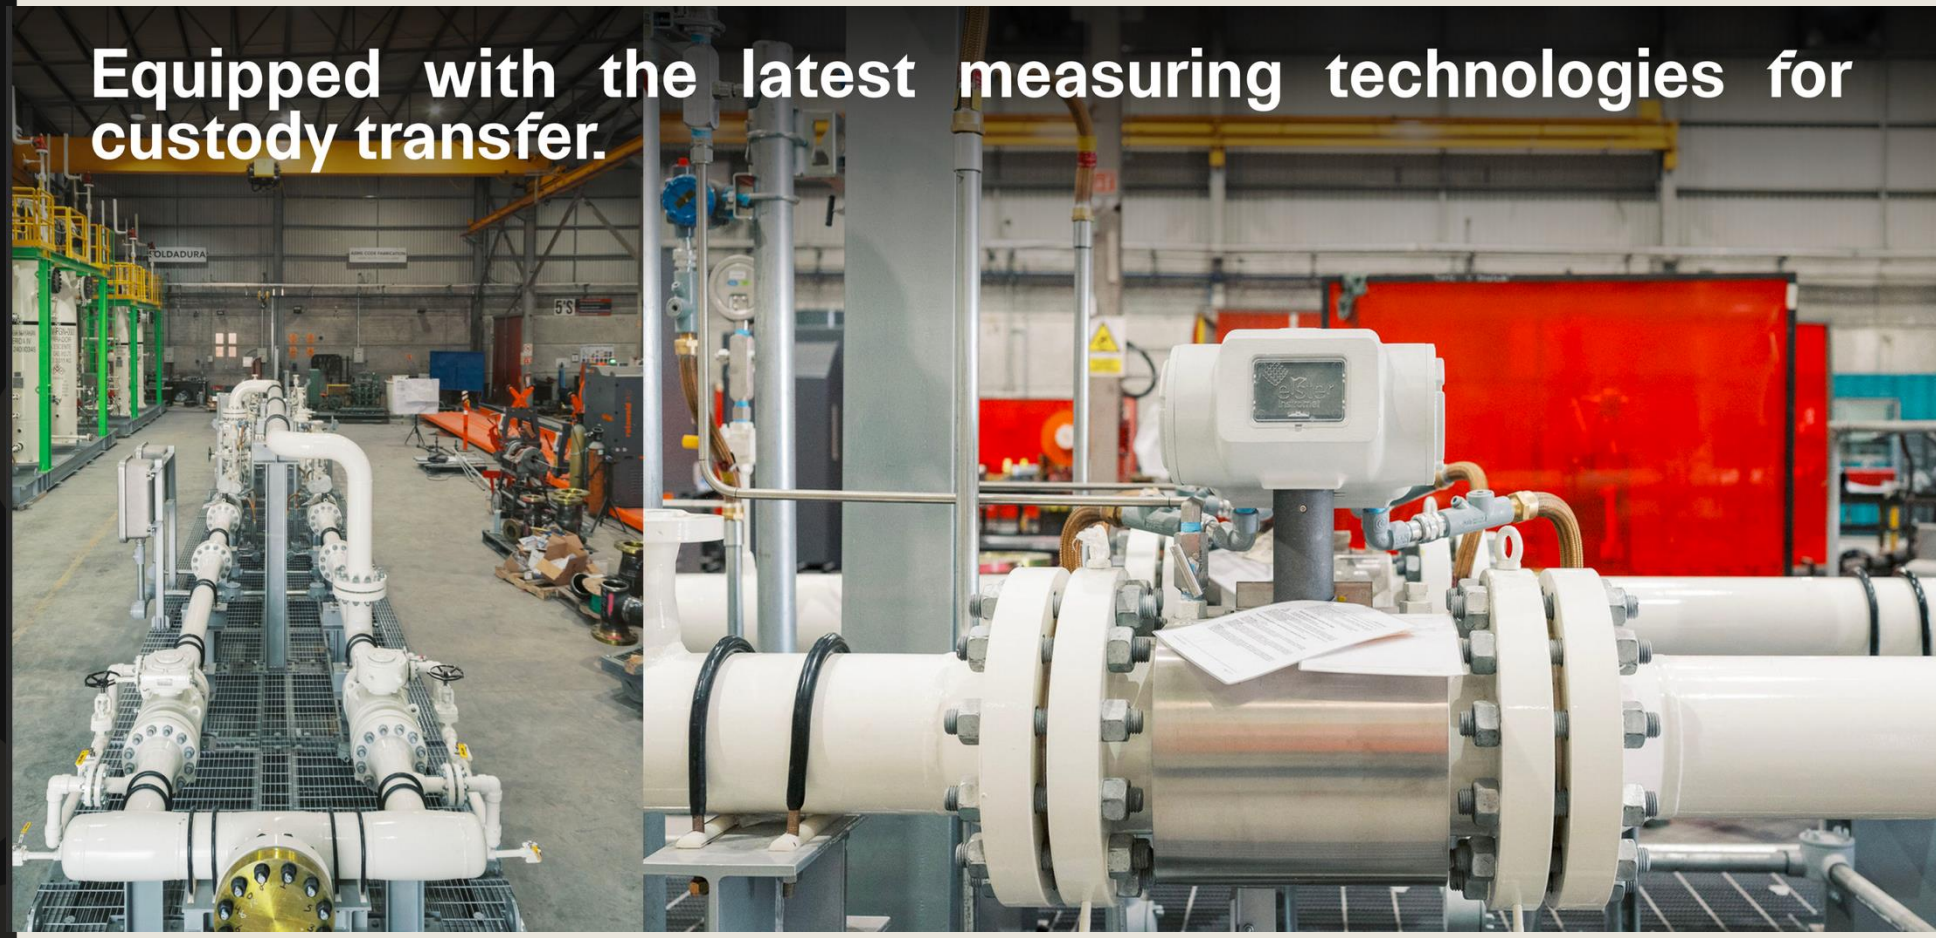

Pressure Reducing & Metering Skid (PRMS), *Regulation skid*

Products & Solutions

Metering Skids (cont.)

Products & Solutions

Pressure Regulation Skids

Our pressure regulation skids are engineered to ensure safe, stable, and efficient flow in natural gas pipelines. Built as compact, pre-assembled units, they **combine advanced control** and safety systems on a **skid-mounted structure for easy installation and long-term reliability**.

System Benefits:

- Consistent and safe pressure regulation
- Control and Safety valves
- Automated Instrumentation in real-time
- Compact skid design for fast deployment and installation time

Products & Solutions

Filtration & Separation Systems

Metal-housed units engineered for natural gas pipelines and hydrocarbon processing, **designed to efficiently remove solid, liquid, and aerosol contaminants**. These systems are applied across both processing plants and transmission lines to safeguard reliability and efficiency.

Applications include:

- Coalescing Filters capture liquid aerosols and fine solids
- Filter Separators simultaneously remove solids and liquids
- Dry Particle Filters precisely remove dust and fine particles

Products & Solutions

Pig Launchers & Receivers

Specialized modular systems **designed for the safe launching and receiving of pipeline pigs**, essential for cleaning, inspection, and ongoing maintenance of natural gas and hydrocarbon pipelines.

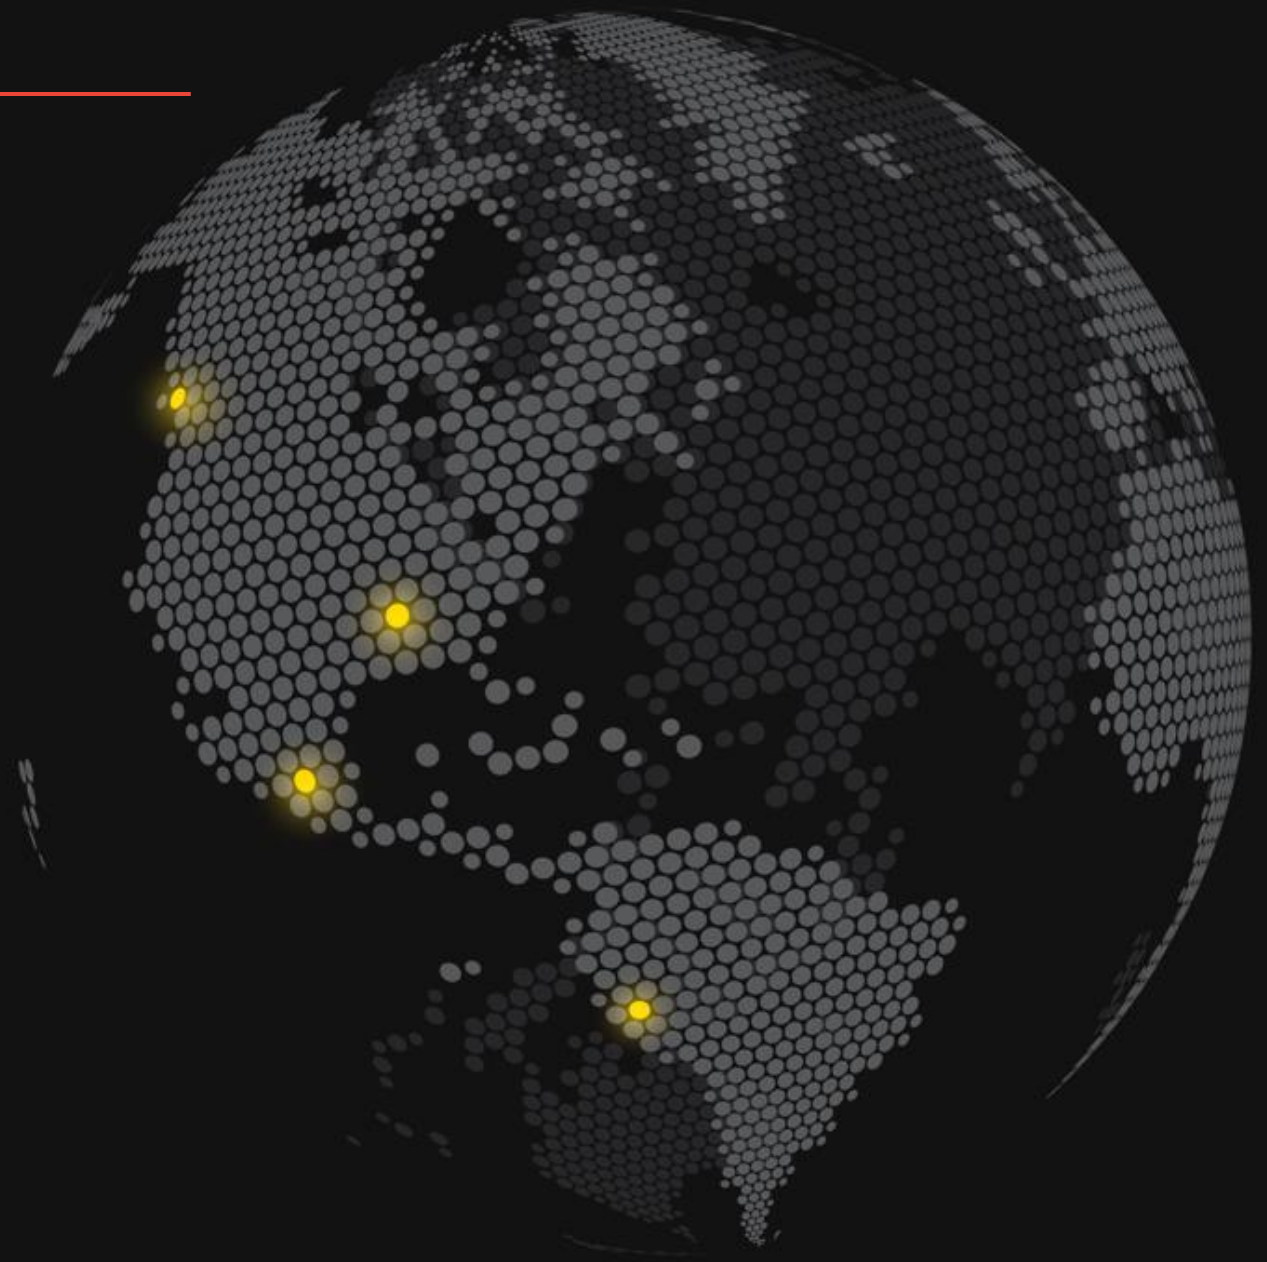

Main components:

- **Main pressure vessel** for pig handling
- **Quick opening closure**
- **Isolation, vent and drain valves**
- **Instrumentation** for pressure, temperature, and pig passage detection
- Primarily **horizontal configuration**
- Mounted on a **skid or steel base**
